

JBER-Richardson

Electrical Power Outages

JBER-Richardson will experience electrical power outages on Friday, October 5, 2018 between 0900 & 1600 hours.

Electrical power outages will only affect the Richardson portion of JBER. Electrical power outages will affect the entirety of Richardson.

Purpose of electrical power outages is to test the JBER-Richardson emergency backup electrical power generation systems.

During testing on Friday, October 5, 2018, JBER-Richardson will experience multiple electrical power outages throughout the day between 0900 & 1600 hours. It is anticipated that facilities should not be without electrical power for more than one continuous hour. There are too many variables within the testing plan to say how long electrical power will be restored before another electrical power outage is experienced.
